

About

Palladium Software has been offering businesses feature rich, interruption free, business enhancing software since 1997. Developed using state of the art technology, Palladium is supported by an extensive international business partner and distributor channel together with a help-desk based in Johannesburg.

Overview

Palladium Accounting software offers a range of feature-rich Accounting Solutions to suit SMEs ranging from the single user business right through to the larger enterprise. Our single pricing model ensures that clients do not pay hidden costs for additional modules such as Point Of Sale, Project Costing, Business Intelligence or Fixed Assets. Our common interface ensures that the product is easy to use, so that new clients are fully operational in a limited time period. Our value proposition is in our technology and product stability, hence why we are the only company in the world to offer a 3-Year money back guarantee on data corruption.

Mission

Our mission is to bridge the gap between the traditional SME and ERP accounting software markets by offering businesses affordable and practical, feature-rich software without compromising ease of use. This is not only supported by our technology but is also evident in the abundant, big-business features inherent in our software.

Lowest Cost of Ownership

Palladium was designed to optimise the latest features in Microsoft's SQL Server database with full data authentication and roll backs to guarantee data integrity. This rock-solid stability means that your business always maintains maximum up-time. No data corruptions means no downtime resulting in no additional consulting costs, no lost staff productivity and no theft or duplicate costs from switching to and from manual systems.

Powerful "Anytime" Reporting

Palladium offers complete real-time, reporting allowing you to run reports at any date in history. These include Customer and Supplier Aging Reports, Inventory Aging or Valuation Reports as well as full Financial Reports for any range of dates, past or present.
